SOLID STATE DIFFUSION IN METALS AND ALLOYS

by S. D. Gertsriken and I. A. Dekhtiar

(State Press for Physico-mathematical literature. Moscow. 1960)

Table of Contents

Foreword ?

Part One

Laws of diffusion and formulas

1. Diffusion equations	9
a) Stationary flow	12
b) Non-stationary flow	14
2. Uni-dimensional diffusion	14
1) Infinite solid	14
2) Semi infinite solid	20
3) Finite solid	21
3. Variable sources of diffusion	28
4. Dependence of diffusion coefficient on concentration	33

Part Two

5. Fundamentals of the theory of diffusion . . .	41
6. Interstitial diffusion in solid solutions . .	52
7. Substitutional diffusion in solid solutions and in pure metals	56
8. Calculation of D.	63
9. Statistical theory of diffusion in ordered alloys .	72
1) Interstitial diffusion of atoms in the inter-knot spaces of the crystalline lattice .	73
a) Diffusion of interstitial atoms in the body-centered-cubic lattice of the β brass type	73

FOR OFFICIAL USE ONLY

FOR OFFICIAL USE ONLY

3.

b) Special features of thermal and concentrational dependence of the diffusion coefficient	74
c) Diffusion of interstitial atoms in face-centered-cubic alloys of the AuCu_3 type	75
2) Diffusion in alloys, by the vacancy- mechanism	77
3) Self-diffusion in alloys	79
a) Alloys with close energies of atomic interaction	79
b) Alloys with radically different energies of atomic interaction	80
c) Effect of interstitial atoms on self-diffusion in a metal	83

4.

Part Three
Methods for Evaluation of Diffusion in Metals

10. Metallographic methods	86
11. Physical methods	89
1) Spectral methods	89
2) Magnetic methods	93
3) Optical methods	97
4) Electrical conductivity method	99
5) Skin-effect method	102
6) Caking method	103
7) Evaluation of microhardness method . .	104
8) X-ray and electronographic methods . .	105
9) Evaporation in a vacuum method	107
12. Method based on utilization of the radioactive isotopes	118
1) Pealing layers	119
a) Certain ways of data processing .	119
b) Diffusion in an infinite solid .	128
2) The "indentation" method	132
3) The absorption method	134
a) Methods of utilizing the coefficient of absorption	134
b) Absorption methods eliminating the coefficient of absorption	140
4) Method of a simultaneous evaluation of both the diffusion coefficient and the vapor pressure	151
13. Methods based on non-elastic processes (internal friction, elastic after effect) .	153
14. Experimental results of studies on diffusion	161

4.

Part Four
The Mechanism of Diffusion

15. The mechanisms of diffusion	162
1) General observation	162
2) Effect of crystal structure on self-diffusion	170
3) The isotope mass effect on the coefficient of diffusion	173
16. Mechanisms of diffusion in alloys	174
1) General mechanisms	174
2) The Kirkendall effect and evaluation of the chemical coefficient of diffusion	180
3) Diffusion in multi-component metallic systems	186
4) The effect of impurities on the diffusion parameter	190
17. The grain size effect of diffusion	218
18. Grain boundary diffusion	222
19. Surface diffusion	239
20. Anisotropic diffusion	248

FOR OFFICIAL USE ONLY

FOR OFFICIAL USE ONLY

5.

21. Diffusion in reactions	252
1) Observations	252
2) Quantitative treatment of diffusion during reaction formation	257
22. Diffusion in a mixture of several phases . .	266

Part Five
Diffusion and Atomic Interaction in Alloys

23. Relations between the self-diffusion para- meters and other physico-chemical constants of metals (alloys)	273
24. The effect of temperature on the activation energy of diffusion	292
25. Interatomic forces in alloys containing transition elements	295
26. The criterion of filling-in and parameters of diffusion in transition elements	310
27. Electron transfer in alloys	323

Part Six
Defects in the Crystalline Structure
and Diffusion in Metals and Alloys

28. Types of atomic distortion in the metal lattice	333
1) Formation and movement of vacancies . .	333
2) Diffusion of dislocated atoms	336
3) Formation and movement of dislocations .	337
29. The effect of defects in the crystalline structure on various properties of metals. .	351
1) The effect of the mobility of atomic defects on the electrical resistance of metals	351
2) The effect of thermal processing on the electrical resistance of metals	354
3) The effect of defects caused by defor- mation on the electrical resistance of metals	359

FOR OFFICIAL USE ONLY

FOR OFFICIAL USE ONLY

5.

4) Certain phenomena related to the motion of dislocations in metals	365
5) The role of defects in crystals on the relaxation phenomena of metals	372
6) Defects in crystals and the mechanism of diffusion in metals and alloys	374
30. The effect of distortion in the crystalline lattice on atomic mobility in metals and alloys	381
31. The effect of nuclear radiation on the various properties of metals	403
1) The effect of irradiation on atomic mobility in a crystalline lattice	403
2) The effect of irradiation on electri- cal resistance in metals and alloys . . .	404
3) The effect of irradiation on the mecha- nical properties of metals	408
4) The effect of irradiation on the pro- cess of diffusion	412
32. Decomposition of super saturated solid solutions	415

6.

Part Seven
Diffusion and Heat Resistance

33. Basic properties of metals controlling their heat resistance	425
34. The mechanism of creep in metals	430
35. The effect of inner stress on the activation energy	438
36. Diffusion and strength of alloys at high temperatures	446
37. On the fracture of metals at high temperatures	453
38. On the brittle strength of metals	463

Part Eight
Utilizing Diffusion Phenomena
in Certain Areas of Engineering

39. The problems in powder metallurgy	476
40. Diffusion and heat resistance of metals . .	489
41. Protective coatings	507
Conclusion	510
Tables	511
Literature	536
